Objective and Investment Policy

Classification of the CIS: Eurozone country equities.

Investment objective: The investment objective is to outperform the benchmark index - EURO STOXX - expressed in euros, net of charges, assuming reinvestment of net dividends or coupons, with targeted volatility below that of the Euro Stoxx index, over a recommended investment period of five years.

Investment policy: The Fund intends to achieve this investment objective through discretionary management and by investing in equities of all market capitalisations with one or more of the following characteristics:

- the capacity to generate positive operating cash flows after investment,
- a balance sheet structure with little or no debt or a net cash position,
- the opportunity to sell assets and return the proceeds to shareholders,
- a weighted average return of the companies in the Fund above the average for listed companies in the Eurozone,
- an active share buy-back policy,
- a stable dividend policy,
- significant distribution of income or the ability to do so.

The portfolio is constructed with the goal of reducing its ex-ante volatility by over 25% relative to its benchmark. To do this, the manager performs a quantitative analysis of each portfolio security's marginal contribution to volatility, using internal tools. The manager also introduces a qualitative stock selection filter. However, the volatility reduction objective is a relative target and the Fund remains exposed to equity market volatility. Similarly, the objective does not guarantee a reduction in ex-post volatility and there are no constraints to that effect.

The portfolio shall be invested as follows:

- a minimum of 90% of the net assets in the equities markets, of which a minimum of 75% of the net assets in the Eurozone equities market,
 - a maximum of 10% of the net assets may be invested in bonds.
- A maximum of 10% of the net assets may be invested in French UCIs. For the purpose of cash management, the Fund may invest in money

market UCI, French short-term money market instruments and French and foreign negotiable debt securities with any credit rating. Investment is solely in UCIs that in turn invest less than 10% of their assets in other UCIs.

These UCIs may be managed by the management company.

The Fund may invest up to the amount of the net assets (without seeking overexposure) in equity and equity index futures on regulated, organised and/or OTC markets to hedge the portfolio against equity risk, volatility and/or dividend risk. A maximum of 10% of the Fund's net assets may be invested in securities with embedded derivatives.

Risk and reward profile

Explanation of the indicator and its main limitations:

The exposure to the equity market explains the Fund's classification in this category.

The historical data used may not provide a reliable indication of the CIS' future risk profile.

We can give no assurance that the category displayed will not change, and the classification may change over time.

The lowest category does not imply a risk-free investment. There is no capital guarantee.

Other material risk factors not incorporated into the indicator:

- Risks associated with derivatives: Use of complex products such as derivatives may increase losses.

The materialisation of one of these risks may result in a decline in the net asset value of the CIS. The other risks are stipulated in the prospectus.

Charges

The charges and fees paid are used to cover the Fund's operating expenses, including the costs of marketing and distributing its units. These charges reduce the investments' potential growth.

Incidental costs collected before or after investment

Front-end load	4.00%
Back-end load	0%

The percentage indicated is the maximum percentage that may be applied to your capital before it is invested or before the proceeds of your investment are distributed. Investors may pay less in some cases. Investors may contact their advisor or distributor to find out the effective front-end and back-end load rates.
